

Patient name:	Aram Ghannadzadeh	Sex:	M
MR Number:	10101989	Date of Birth:	04/05/1984
Source of request:	OUTPATIENT WARD	Order ID:	E22FX000025367

Examination:	Date and Time of Examination:
DUP-SCAN XTR VEINS COMPLETEETE BILATERAL STUDY	22/04/2022 13:19

U/S done by Mrs / MARJ
Reported by Dr / Sherif .

U/S REPORT

DUPLEX DOPPLER EXAMINATION OF BILATERAL LOWER LIMB VENOUS SYSTEM:

- Bilateral external iliac , common femoral , **right** superficial femoral veins are totally compressible with normal spontaneous, phasic, uni-directional flow inside that shows augmentation on distal muscle compression.

-**Right** popliteal vein down to distal parts of anterior and posterior tibial veins are seen partially thrombosed with hyper echoic intra luminal thrombus showing peripheral recanalization .

-**Left** superficial femoral vein , popliteal vein down to distal parts of anterior and posterior tibial veins are seen partially thrombosed with hyper echoic intra luminal thrombus showing peripheral recanalization .

- Competent sapheno-femoral junction with no evidence of flow reflux on Valsalva.

-The **right** GSV is seen patent , compressible with no evidence of superficial thrombophlebitis .

-The **right** SSV is seen distended and occluded with hyper echoic thrombus with loss of normal compressibility .

- Patent **left** superficial saphenous venous system with no evidence of old or recent superficial thrombophlebitis.

- No superficial edema .

OPINION:

* **Bilateral chronic DVT with peripheral re-canalization , as above described .**

***Superficial thrombophlebitis of the **right** SSV .**

Reported and **Dr. Sherif Elsharkawi**
